

# coresuite mobile for BlackBerry

Managers, sales reps and service personnels all have exactly the right information they require for their daily work and decisions to be made while with customers.

- ▶ Online and offline access to corporate data
- ▶ No investment or costly configuration required
- ▶ No changes need to be made to the existing ERP solution
- ▶ Software on a subscription basis per user (SaaS)
- ▶ Standard modules for all applications in the business
- ▶ Thanks to Cloud technology data is available and ready for use immediately

Available for:

Management

## Reports & Dashboards Stay up to date with the financial status of your company!

The dashboards are graphical analyses, providing you with clear and quick information on current company figures. Continuous synchronization with your ERP means that the graphics are always up-to-date.

### Alerts

Define what makes a warning necessary!

Don't miss alert messages from your ERP system anymore. You can have messages sent to you triggered by default, or you can define them in advance. For example, if an important customer places an order, you will be informed automatically.

### Employees

Process optimization through internal contacts!

This HR function allows you to contact your colleagues at any time and from any place. You can make calls or send e-mails directly from the app. Information about their position is visible, as well as information on the projects and customers managed by the respective colleague.

### Business Partner

View current business partner data at a glance and be closer to your customers!

All useful data on your Business Partners is displayed on your mobile device. A quick glance gives you an overview of the distribution of responsibilities in the company and enables you to view information such as addresses, telephone numbers, current sales figures, open invoices, past activities and much more.

# The coresuite cloud

The Cloud solution adds complimentary solutions (coresuite mobile or eCommerce) to your existing ERP system in an efficient and economically affordable way.

- ▶ Forward-thinking solution to classic business problems
- ▶ No investment in Middleware
- ▶ High security standards
- ▶ Suitable for on-site and mobile use
- ▶ Minimal monthly fees
- ▶ Immediate availability upon completion of subscription agreement

- 1** Your ERP master data remains locally saved on your server. The **coresuite cloud connector** enables the synchronization between your ERP system and the **coresuite cloud** (master cloud). After selecting and confirming which data you wish to synchronize, it is sent to the **coresuite cloud** (via push and sync), encrypted via SSL (Secure Socket Layer).
- 2** A secure data exchange is indispensable. On one side is the company's firewall that protects your data from unauthorized access. On the other side the **coresuite cloud** is equipped with an additional firewall that provides the highest standard of security. Your data is protected by an SSL encryption during each transfer from the cloud to your mobile device or other ecosystems.
- 3** A copy of the data (Shared Business Objects) from your ERP environment is stored in the **coresuite cloud** and is then made available to the relevant mobile devices and ecosystems. The **coresuite cloud** is split into several databases (data clouds) which communicate with the master cloud via VPN (Virtual Private Network). Furthermore, the data is transferred via SSL encryption and can only be accessed by authorized users.
- 4** Data stored in the **coresuite cloud** can be retrieved by various mobile devices. The **coresuite cloud** allows you to access the required data any time, any place. **coresystems**, with **coresuite mobile**, provides a tailored solution for the mobile data exchange between your ERP and your mobile device. In the near future, **coresuite mobile** is available on a range of mobile devices, for details please visit our website [www.coresuite.com](http://www.coresuite.com)
- 5** The **coresuite cloud** can communicate with other ecosystems. You can easily integrate other applications such as a web shop (**coresuite eCommerce go**) in your ERP. The **coresuite** master cloud retrieves the required data from the ecosystem, processes it, and then sends it, encrypted via SSL, to the various mobile devices.
- 6** The data exchange between the ecosystem and the applications integrated with your ERP on your local PC, is also handled by the **coresuite cloud**. Again, the master cloud retrieves the relevant data from the ecosystem, processes it, and sends it to the ERP user in an encrypted form.
