

coresuite mobile for iPad

coresystems®

Managers, sales reps and service personnels all have exactly the right information they require for their daily work and decisions to be made while with customers.

- ▶ Online and offline access to corporate data
- ▶ No investment or costly configuration required
- ▶ No changes need to be made to the existing ERP solution
- ▶ Software on a subscription basis per user (SaaS)
- ▶ Standard modules for all applications in the business
- ▶ Thanks to Cloud technology data is available and ready for use immediately

Reports & Dashboards

Stay up to date with the financial status of your company!

The dashboards are graphical analyses, providing you with clear and quick information on current company figures. Continuous synchronization with your ERP means that the graphics are always up-to-date.

Service Calls

Improved Customer Service through more efficient personnel planning!

When the office receives a service call, it can be assigned directly to a service representative. The service representative receives immediate information about the business partner, the contact person, the address and the detailed information of the service call.

Efforts

Save time by quick and simple time recording on your mobile device.

Record your efforts on the go on your mobile device and at the same time keep your customers up to date. This time recording function is synchronized with **coresuite time** (AddOn) in your ERP system. In addition, time recording on your mobile device can provide you with a current overview of your total working hours.

Geo-location

Information directly on the map!

Geo-location allows you to display customer contact data directly on the map. You can also see where your colleagues are, or which customers are near your location. This app is also available as widget in your SAP Cockpit.

The following functionality is additionally available on the iPad: Leads, Activities, Employees, Worktime, Items&Stock, Opportunities, Status, Orders, Follow-ups, Alerts, Price List. Visit www.coresuite.com for more information

The coresuite cloud

The Cloud solution adds complimentary solutions (coresuite mobile or eCommerce) to your existing ERP system in an efficient and economically affordable way.

- ▶ Forward-thinking solution to classic business problems
- ▶ No investment in Middleware
- ▶ High security standards
- ▶ Suitable for on-site and mobile use
- ▶ Minimal monthly fees
- ▶ Immediate availability upon completion of subscription agreement

- 1** Your ERP master data remains locally saved on your server. The **coresuite cloud connector** enables the synchronization between your ERP system and the **coresuite cloud** (master cloud). After selecting and confirming which data you wish to synchronize, it is sent to the **coresuite cloud** (via push and sync), encrypted via SSL (Secure Socket Layer).
- 2** A secure data exchange is indispensable. On one side is the company's firewall that protects your data from unauthorized access. On the other side the **coresuite cloud** is equipped with an additional firewall that provides the highest standard of security. Your data is protected by an SSL encryption during each transfer from the cloud to your mobile device or other ecosystems.
- 3** A copy of the data (Shared Business Objects) from your ERP environment is stored in the **coresuite cloud** and is then made available to the relevant mobile devices and ecosystems. The **coresuite cloud** is split into several databases (data clouds) which communicate with the master cloud via VPN (Virtual Private Network). Furthermore, the data is transferred via SSL encryption and can only be accessed by authorized users.
- 4** Data stored in the **coresuite cloud** can be retrieved by various mobile devices. The **coresuite cloud** allows you to access the required data any time, any place. **coresystems**, with **coresuite mobile**, provides a tailored solution for the mobile data exchange between your ERP and your mobile device. In the near future, **coresuite mobile** is available on a range of mobile devices, for details please visit our website www.coresuite.com
- 5** The **coresuite cloud** can communicate with other ecosystems. You can easily integrate other applications such as a web shop (**coresuite eCommerce go**) in your ERP. The **coresuite** master cloud retrieves the required data from the ecosystem, processes it, and then sends it, encrypted via SSL, to the various mobile devices.
- 6** The data exchange between the ecosystem and the applications integrated with your ERP on your local PC, is also handled by the **coresuite cloud**. Again, the master cloud retrieves the relevant data from the ecosystem, processes it, and sends it to the ERP user in an encrypted form.
